We are experiencing website problems

The Northwest Clean Air Agency air quality monitors in Bellingham and Lynden/Custer are working properly, but the fine particle (PM2.5) data is not displaying correctly in our Air Quality Center.

Our data is displaying correctly on the statewide air monitoring network at <https://fortress.wa.gov/ecy/enwiwa/>. That website may have problems loading at times because of the increase in visitors to the site who want to check on air quality issues caused by wildfire smoke.

We are working with our website contractor to fix the display problems. That fix may take up to 48 hours.

We apologize for the inconvenience.
