Subject: Post Point Comment

Hello all,

It is critical to deny the Post Point permit. Frequent monitoring and regulating of CO and forever chemicals is sensible, consequential and humane.

Continuing to prop up this aging, undersized facility is dangerous and financially irrational.

These emissions harm all bodies indiscriminately; so much is outside our control, please take the opportunity to improve something we can control. Even better, it sounds like there are more financially prudent options to explore.

I support Larry's careful considered recommendations.

Thank you for your time,
Melissa
